*Henry Ward Beecher*

*Elysium* is a new, innovative project.

In the immense world of coins, our token wants to offer its holders a different way to view their investment.

It is not a token with a mere speculative goal, but a real coin to give the possibility for individuals and companies to buy our services.

# ELYSIUM

## Litepaper

*"Ones best success comes after their greatest disappointments"*  
*Henry Ward Beecher*

### **The project**

- 1 - launch of Elysium token
- 2 - creation of the *pool*
- 3 - community management
- 4 - listing, marketing and sponsorship
- 5 - "*token chiavi in mano*" service

# ELYSIUM

## Litepaper

*"Ones best success comes after their greatest disappoinments"*  
*Henry Ward Beecher*

### 1 - launch of Elysium coin

The absolute protagonist of the Elysium project is the token, launched on the Binance Smart Chain network, it is negotiable just like all existing coins.

Each investment, both incoming and outgoing, provides for automatic rewards, specifically preset percentages are redirected to wallets of holders (investors), liquidity and marketing.

On the "Tokenomics" document you will find all the relative technical features.

On the other hand, the manual BURN is periodically foreseen. In this case the DEV's "burns" a part of tokens is definitively to reduce the amount of tokens circulating (thus decreasing the total supply), this will produce an immediate increase in value of the token itself.

## 2 - creation of the Elysium pool

The *pool* will be implemented on the website [www.elysium-coin.com](http://www.elysium-coin.com) this will take place later a few days after the token is released.

This will allow all investors to stake own elysium tokens by receiving a percentage of the profit (APR).

The APR of the token may vary according to the size of the incoming investments and staking will be to the investors benefit **Only** the pool will be included on the site, there will NOT be the so-called *farm* (which binds elysium with other coins) or swap to be able to convert tokens.

This decision was made to achieve the goal of making all the *Elysium* world extremely simple and usable, we wanted. Our investors to easily, confidantly navigate the following steps:

- buy *Elysium* tokens
- stake them into the pool to increase the number of tokens
- sell their profits and monetize their investments
- leave tokens in the pool to generate new profits

### 3 - Community management

We at *Elysium* strongly believe that investors are a cornerstone of our project.  
*Our community is the heart of Elysium.*

To grow and develop it we have the following weapons:

- Telegram channels
- Social media

Instagram  
Facebook  
Twitter  
Reddit  
Discord  
Tik Tok

Both national and international Telegram channels will be managed by mother tongue administrators to provide information to users as clearly and quickly as possible, all of them will be coordinated by the dedicated admin.

All social media will be managed independently by the admin who will take care of both posting the news regarding *Elysium*, daily charts and much more to tighten new relationships with sponsors and influencers.

Henry Ward Beecher

### 4 - listing, marketing and sponsorship

The token will be listed on the major platforms including the most important:

pancakeswap.finance  
poooin.app  
coinmarketcap.com  
coingecko.com

For now this token will NOT be present on exchanges, the investments usually diverted in this sense will be utilized in areas that are most profitable for our holders, like marketing, boost etc. etc.

MARKETING, will have a dedicated portfolio that will convey part of the entry and exit fees, it will be managed to expand the knowledge of the ELYSIUM project. In addition to the social media already mentioned, it will also invest in channels like *Youtube* that are dedicated to the *cryptocurrency* world, this will include all platforms that we will deem suitable and feasible.

The sponsors and influencers we choose will be directly or indirectly of the financial world, we want to utilize the available sums in such a way that it would be as profitable as possible.

### 5 - "token chiavi in mano" service

Given the constant growth of the world of cryptocurrencies and the many companies request to have a proprietary token for payment of their services, Elysium makes available the own know-how for the creation of new coins.

The Elysium service includes:

- the programmed token (fork of Safemoon) in the Binance Smart Chain with rewards in token or *BNB*
- the dedicated website
- logo and design
- creation and management of the Telegram community with international groups and their mother tongue admins
- creation and management of social media
  - Twitter
  - Instagram
  - Facebook
  - Reddit
- marketing on Telegram groups and social profiles of most important influencers in the crypto and finance sector

**The proceeds (cost to be defined with the companies on the basis of their needs) will be used to:**

- **buy the same amount of LYS**
- **burn the entire amount earned**
